How to Measure for your New Cabinets

Step 1.

Find the point on the garage door rail where it begins to curve down (A) and begin your measurements there. Measure from point A to the step at the head of the garage, if the step is present (B) and from point A to the end of the garage door rail. Write down the measurements in the spaces provided. Next, measure from the stem wall (if present) to the ceiling at the end of the garage door rail. Write down this measurement.

Step 2.

Measure the space between the door rail and the garage wall to determine what depth of cabinet to order, either 16" or 24" deep. Write down this measurement.

Step 3.

Repeat this process for the opposite wall.

Step 4.

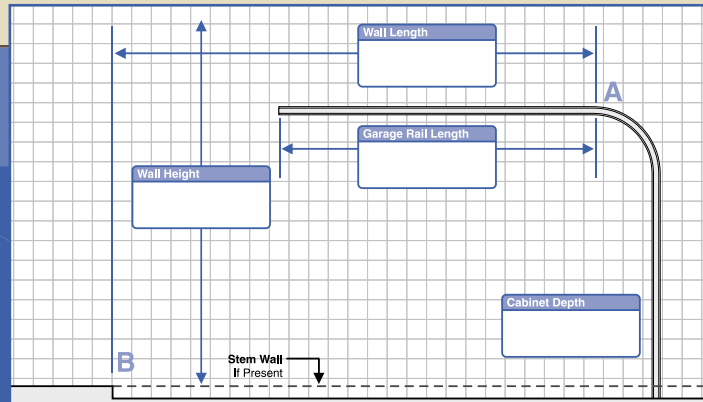

Measure wall to wall across the head of the garage. Pay close attention to any obstructions or protrusions, such as doors, plumbing fixtures, electrical boxes, etc. Write down the measurements and mark any protrusions.

Step 5.

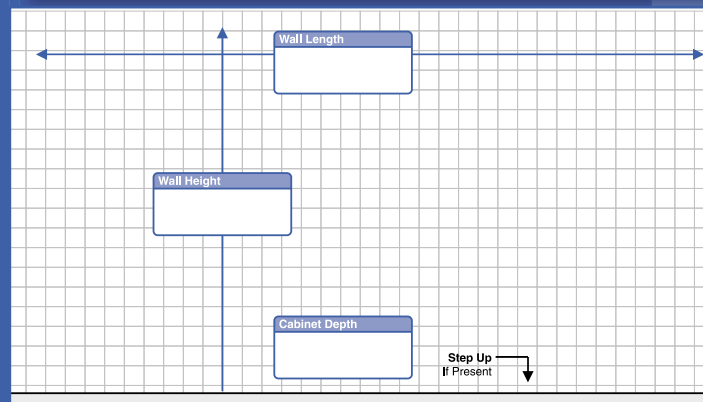

Choose the cabinetry that best fits the space and your personal needs. Keep in mind that measurements for your cabinets should be in 1' increments. See the various configurations enclosed for ideas, or create a custom configuration that suits your storage needs.
